1 Introduction

This document serves as a supplement to the research thesis with the title 'Expressing legal norms with Ampersand'. This supplement contains various scenarios' to demonstrate the working of the implementation with Ampersand language:

- Scenario example of privilege-noright legal concept;
- Scenario example of right-duty legal concepts;
- Scenario example of power-liability legal concepts;
- Scenario example of preconditions concept;
- Scenario example of exception (based on activity) concept.

The implementation works in an environment with Apache webserver, MySQL database and the PHP module. The procedure for installation is available at http://wiki.tarski.nl/index.php/Installation_Guide.

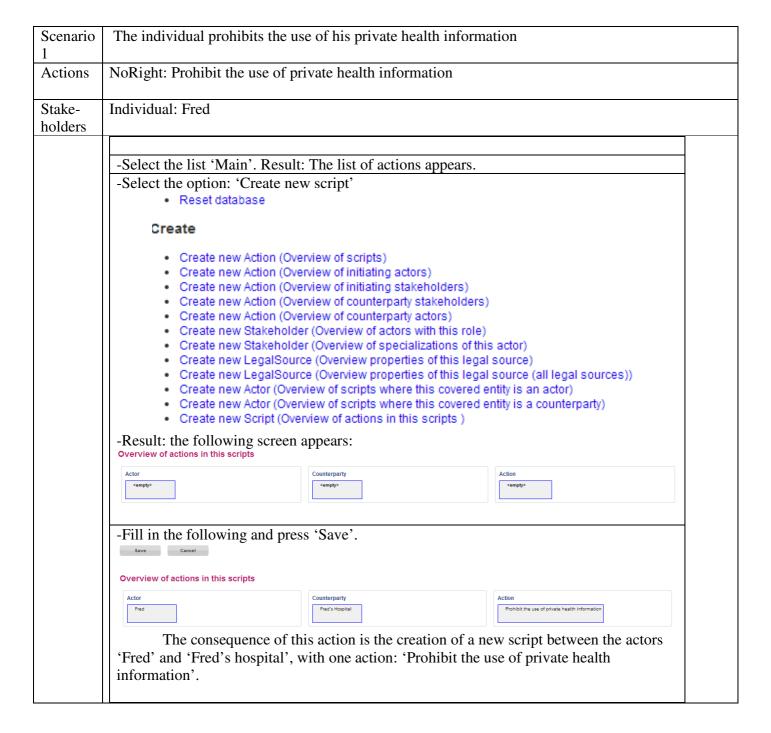

The implementation consists of the following files:

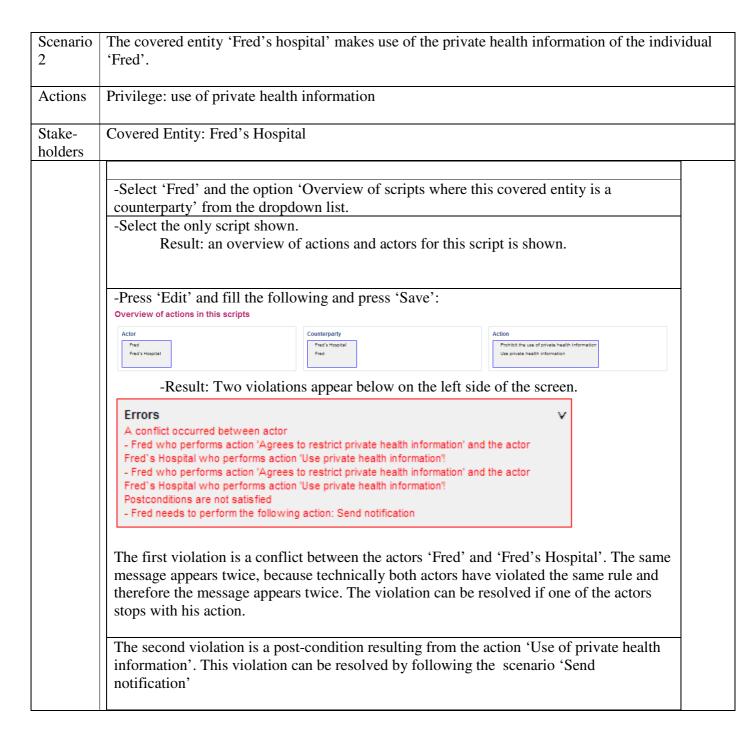

- Main.adl
- NormativeSystem_Relations_V04.adl
- NormativeSystem_Rules_V04.adl
- IFC-RequirementsEngineer.ifc
- HIPAAPrivacyRule.pop

The file 'Main.adl' has only references to the other files. The file 'NormativeSystem_Relations_V04.adl contains the definition of the concepts and relations, the file 'NormativeSystem_Rules_V04.adl' contains the definition of the rules. The '*..ifc' file contains the definition for the graphical user interface. The file 'HIPAAPrivacyRule.pop' contains the population of the concepts and relations.

2 The Privilege-NoRight implied legal concepts

The purpose of this scenario is to demonstrate the implementation of the privilege-noright legal concepts.

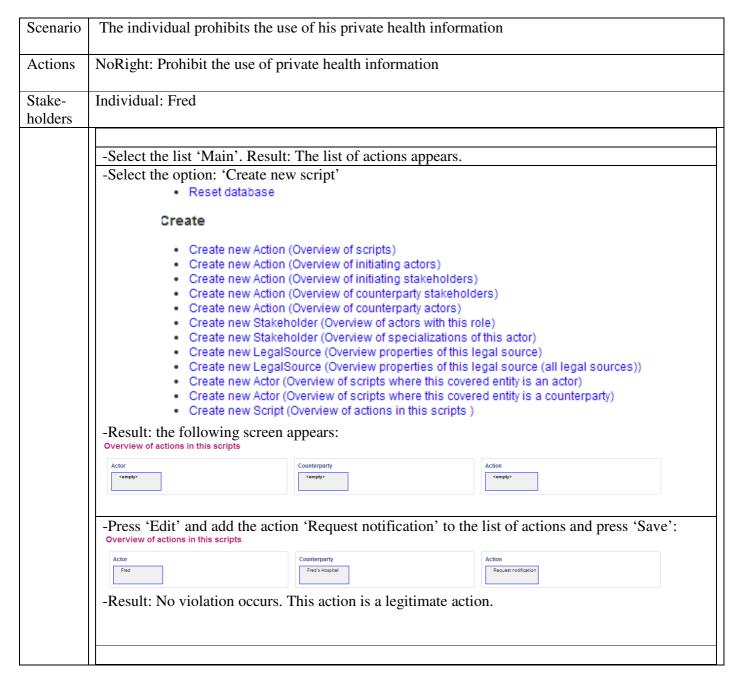

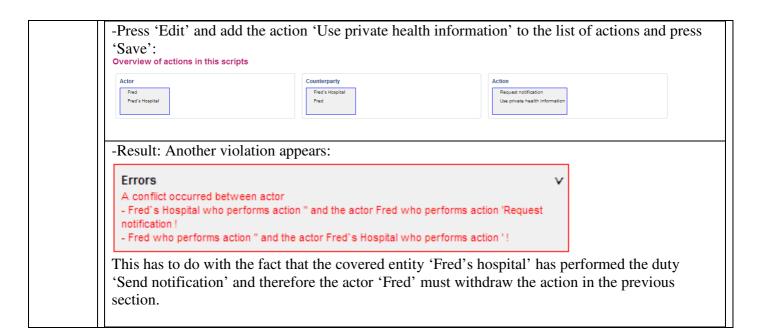

3 The Right-Duty implied legal concepts

The use cases 'Use of private health information' and 'Send notification' relate to each other because performing the first action leads to a post conditional action 'Send notification', which has the legal concept of Duty.

As long this is action is not performed, the individual has a right, in this case the right to request a notification.

4 The Power-Liability legal concepts

	The individual agrees to restriction of the use of his private health information						
Actions	NoRight: Agree to restriction of the use of private health information						
Stake- olders	Individual: Fred						
olders	-Select the list 'Main'. Result: The list of actions appears. -Select the option: 'Create new script' Reset database Create Create new Action (Overview of scripts) Create new Action (Overview of initiating actors) Create new Action (Overview of initiating stakeholders) Create new Action (Overview of counterparty stakeholders) Create new Action (Overview of counterparty stakeholders) Create new Action (Overview of counterparty actors) Create new Stakeholder (Overview of actors with this role) Create new Stakeholder (Overview of specializations of this actor) Create new LegalSource (Overview properties of this legal source) Create new Actor (Overview of scripts where this covered entity is an actor) Create new Actor (Overview of scripts where this covered entity is a counterparty) Create new Script (Overview of actions in this scripts)						
	-Result: the following screen appears: Overview of actions in this scripts Actor Counterparty Counterparty Counterparty Action Compty>						
	-Fill in the following and press 'Save'. Overview of actions in this scripts Actor Fred Counterparty Fred's Hospital The consequence of this action is the creation of a new script between the actors 'Fred' and 'Fred's hospital', with one action: 'Agrees to restrict private health information'.						

5 Preconditions of actions

The use cases 'Use of private health information' and 'Send notification' relate to each other because performing the first action has the consequence that the second action must also be performed. As long as this is not the case the violation 'Post conditions are not satisfied...' holds.

Scenario The covered entity 'Fred's hospital' sends a notification to the individual 'Fred'.	
Actions Right: Send notification	
Stake- holders Covered Entity: Fred's Hospital	
Caladda Pat Mair Day In The Pat of a discussion	
-Select the list 'Main'. Result: The list of actions appears. -Select the option: 'Create new script'	
Reset database	
Create	
Create new Action (Overview of scripts)	
Create new Action (Overview of initiating actors)	
Create new Action (Overview of initiating stakeholders)	
Create new Action (Overview of counterparty stakeholders)	
Create new Action (Overview of counterparty actors) Create new Stakeholder (Overview of actors with this role)	
Create new Stakeholder (Overview of actors with this role) Create new Stakeholder (Overview of specializations of this actor)	
Create new LegalSource (Overview properties of this legal source)	
 Create new LegalSource (Overview properties of this legal source (all legal sources)) 	
Create new Actor (Overview of scripts where this covered entity is an actor)	
 Create new Actor (Overview of scripts where this covered entity is a counterparty) Create new Script (Overview of actions in this scripts) 	
-Result: the following screen appears: Overview of actions in this scripts	
Actor Counterparty Action	
<empty></empty>	
-Fill in the following and press 'Save'.	
Overview of actions in this scripts	
Actor Counterparty Action	
Fred's Hospital Use private health information	
The consequence of this action is the creation of a new script between the actors	
'Fred' and 'Fred's hospital', with one action: 'Use private health information'.	
-Result: Another violation appears:	

Errors

Postconditions are not satisfied

- Fred's Hospital needs to perform the following action: Send notification

This has to do with the fact that the covered entity 'Fred's hospital' has performed the action 'Use private health information' and therefore must send a notification as the law prescribes.

٧

6 Exception based on previously performed actions

Scenario 1	cenario The individual enrolls in a group health plan					
Actions	This action has no modality that relates to one of the Hohfeldian legal concepts: 'Receive health benefits'.					
Stake- holders	Individual: Bernard					
		_				
	-Select the list 'Main'. Result: The list of actions appears.					
	-Select the option: 'Create new script'					
	Reset database					
	Create					
	 Create new Action (Overview of initiating actors) Create new Action (Overview of initiating stakeholders) Create new Action (Overview of counterparty stakeholders) Create new Action (Overview of counterparty actors) Create new Stakeholder (Overview of actors with this role) Create new Stakeholder (Overview of specializations of this actor) Create new LegalSource (Overview properties of this legal source) Create new LegalSource (Overview properties of this legal source (all legal sources)) Create new Actor (Overview of scripts where this covered entity is an actor) Create new Actor (Overview of scripts where this covered entity is a counterparty) Create new Script (Overview of actions in this scripts) 					
	-Fill in the following and press 'Save'. Actor Bernard Prince Counterparty Bernard's Group Health Plan Receive health benefits					
	The consequence of this action is the creation of a new script between the actors 'Bernard' and 'Bernard's Group Health Plan', with one action: 'Receive health benefits'.
